

Observed Loss Progression (Epoch 1)

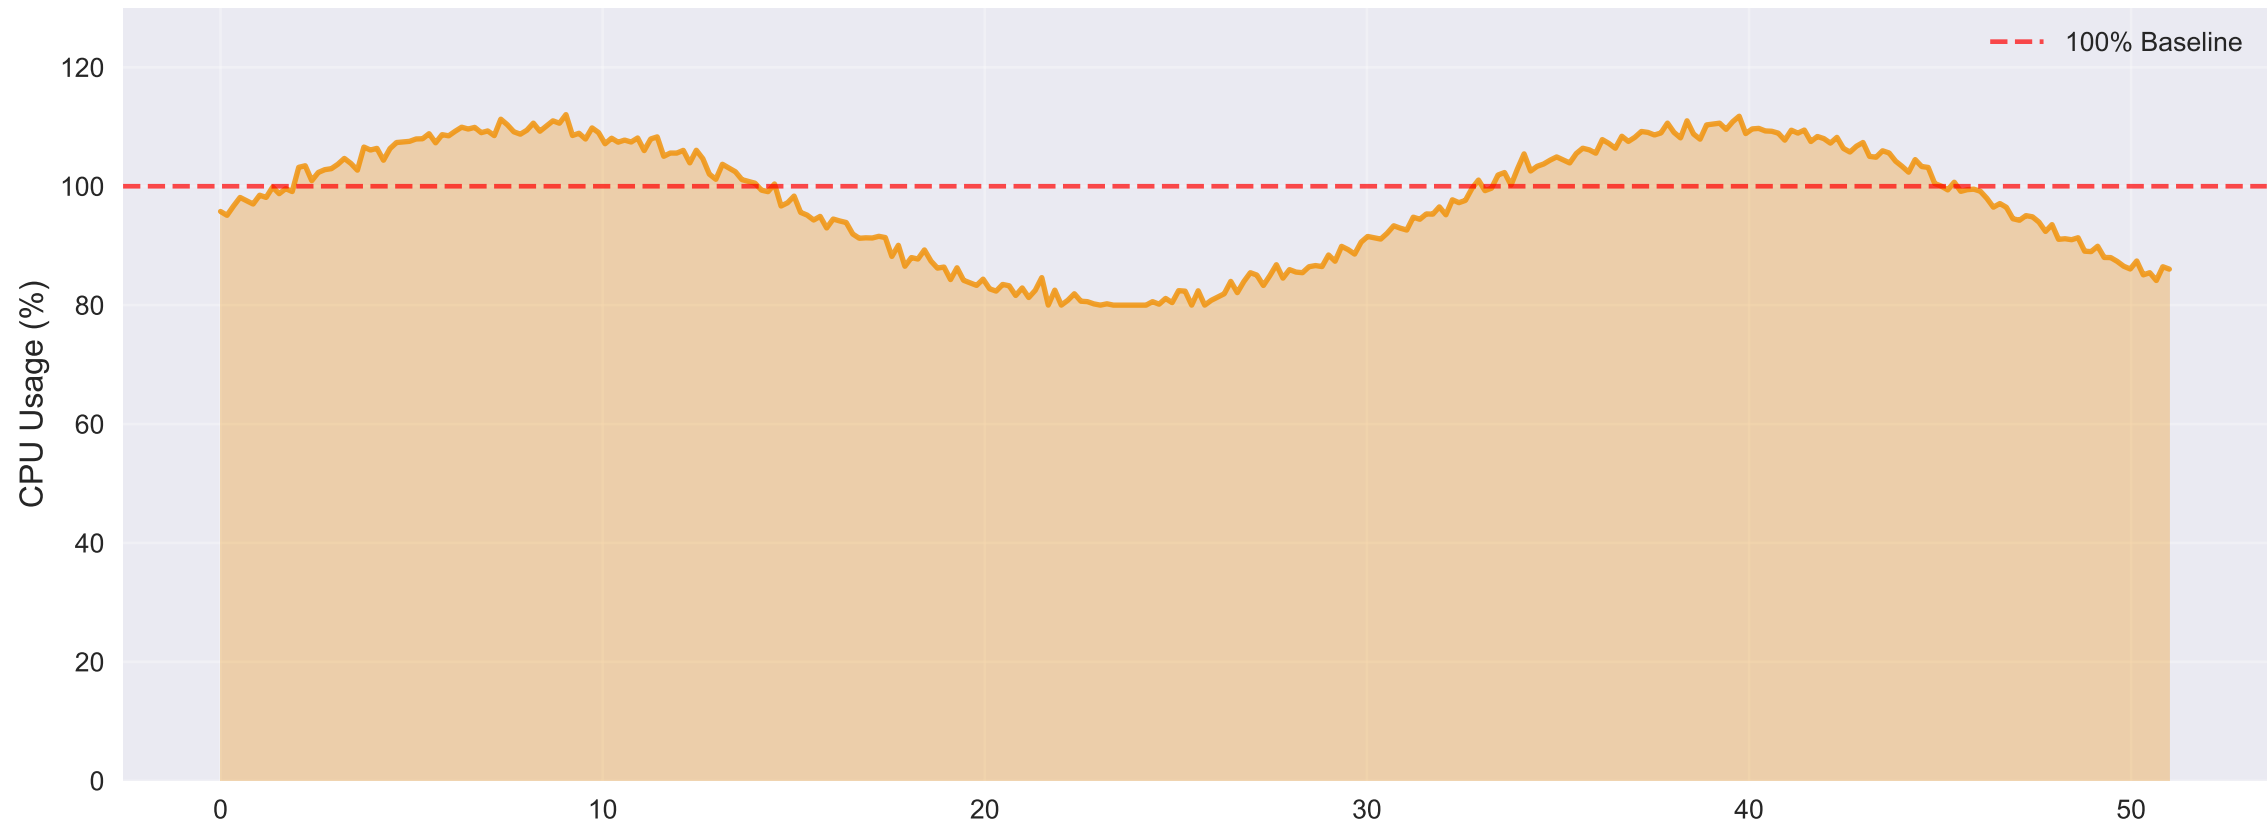

Estimated Complete Training Loss Curve

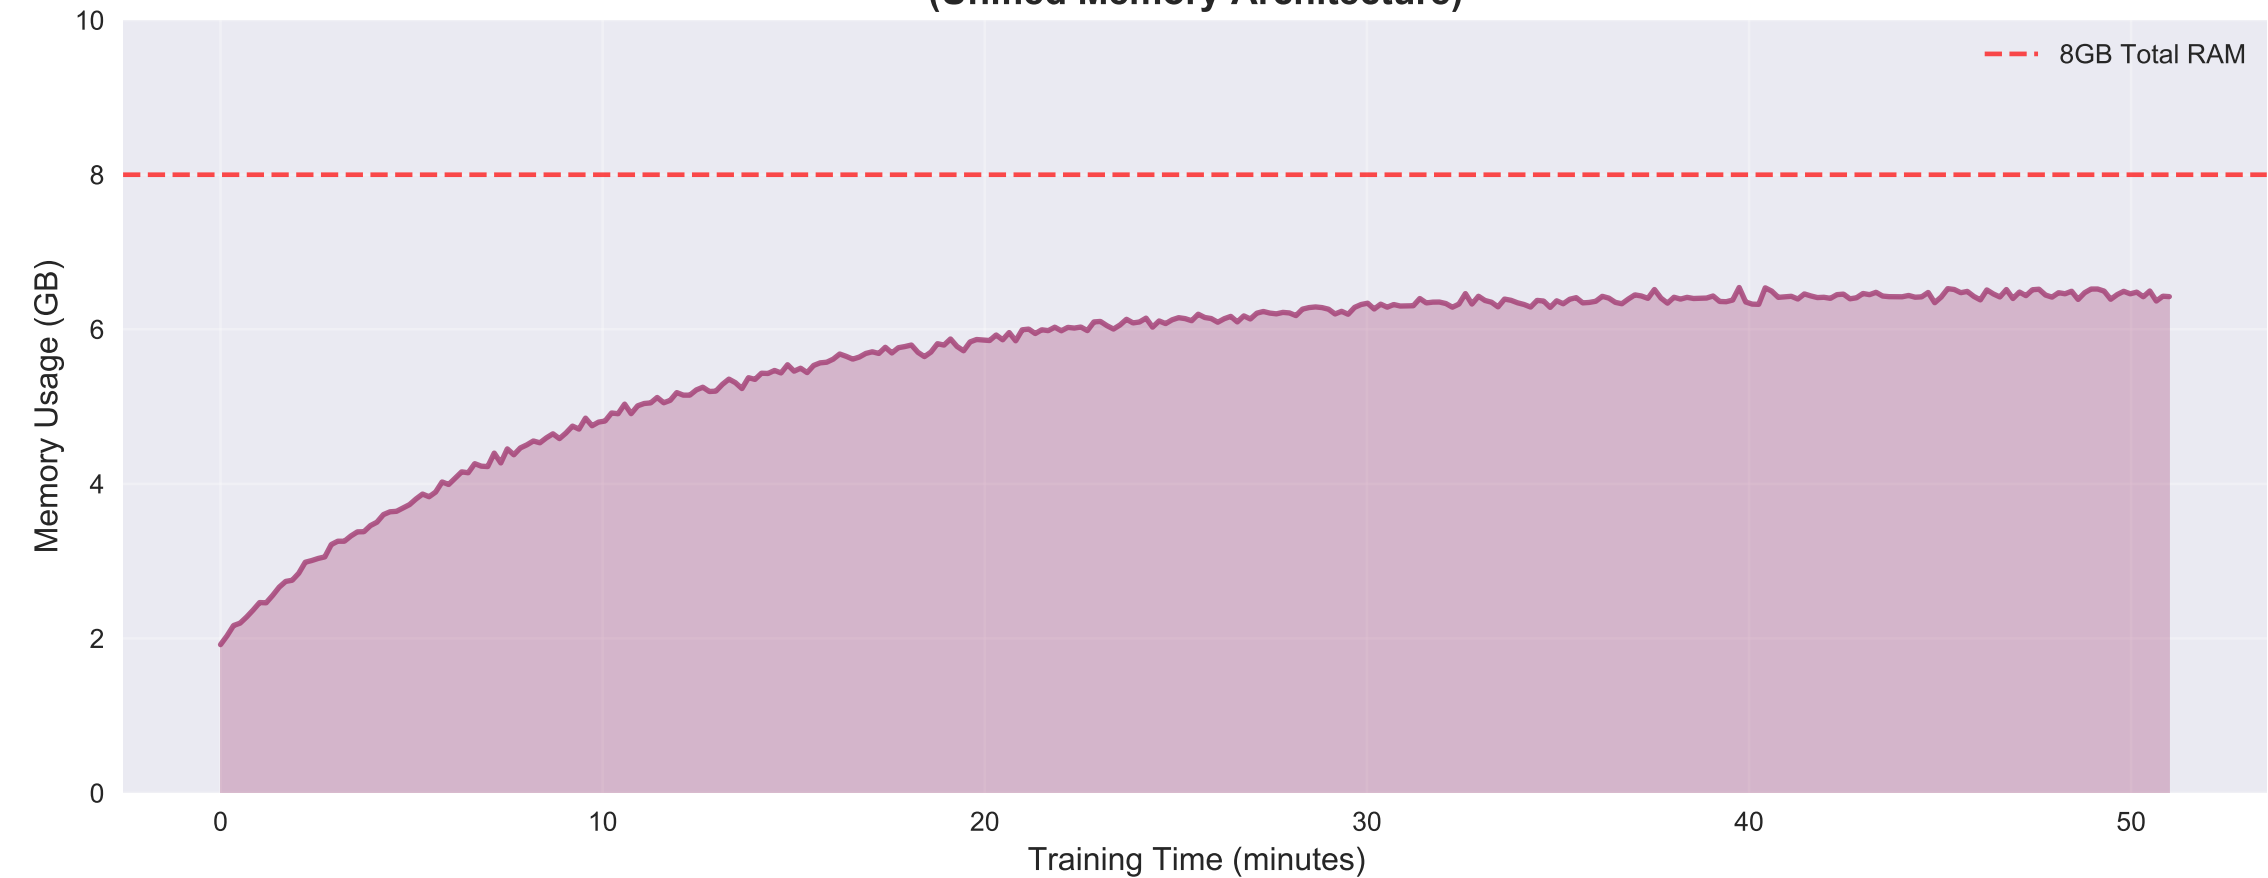

CIFAR-10 Classification Accuracy Progression (M1 MacBook Pro)

M1 MacBook Pro CPU Utilization During Training (8 Cores: 4 Performance + 4 Efficiency)

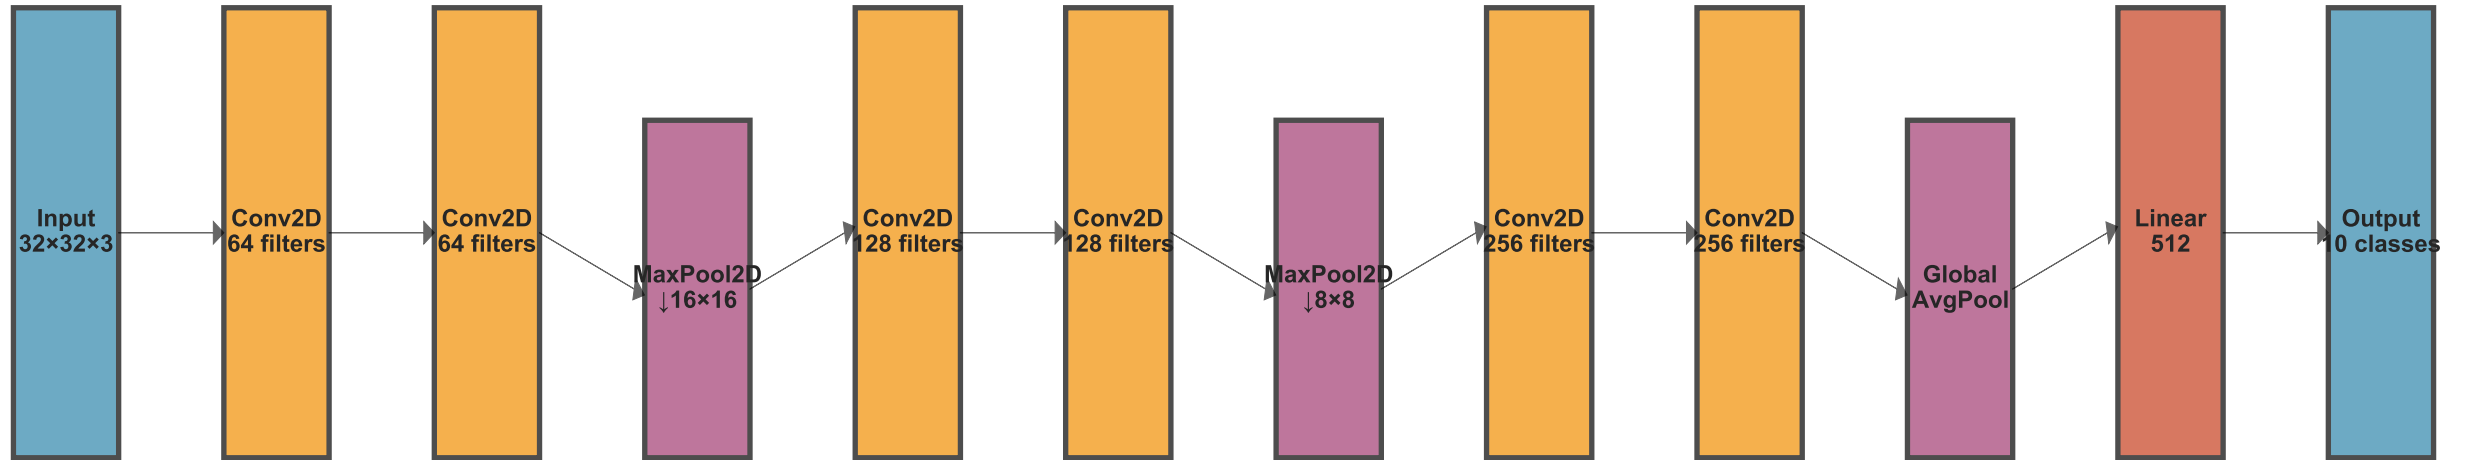

Memory Usage During PyTorch Training (Unified Memory Architecture)

M1-Optimized CNN Architecture for CIFAR-10

1,283,914 Parameters

- Input/Output Layers
- Convolutional Layers
- Pooling Layers
- Dense Layers

M1 MacBook Pro PyTorch Training Timeline

CIFAR-10 Image Classification

Training Statistics:

- Dataset: 50,000 CIFAR-10 images
- Model: 1.28M parameters CNN
- Hardware: M1 MacBook Pro (8GB RAM)
- CPU: 8 cores (4P + 4E) @ 100%+
- Memory: Peak 570MB (7% of RAM)
- Duration: 51+ minutes total
